Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C.Comment: This protein involved in leukocyte-endothelial adhesion; it mediates adhesion
C.Superfamily: L-selectin; C-type lectin homology; complement factor H repeat homology;
F;1-3770main: C-type lectin homology cLCh-
F;29-155/Domain: C-type lectin homology cLCh-
F;360-191/Domain: BGF homology cEGP-
F;197-254/Domain: complement factor H repeat homology <FHI>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-05-252-991A-26648

Sequence 26648, Application US/09252991A

Sequence 26648, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: MARC J. Rubenfield et al.

APPLICANT: MARC J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPRENCE: 107196.138

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR APPLICATION NUMBER: US 60/094,190
APPLICANT: MARC O. Rubenfield et al.
APPLICANT: MARC O. Rubenfield et al.

Sequence 14297, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION: DECOME

APPLICANT: GATY Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CORRESSION OF THE REFERENCE: 2709-2004001

CURRENT FILING DATE: 2000-01-27

PRIOR APPLICATION NUMBER: US 60/117,747

PRIOR PRIOR DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342

LENGTH: 63

J. Mol. Evol. 47:190-199(1998).
-!- CATALTYTC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate + NAD(+) = 3-phospho-D-glyceroy1 phosphate + NADH.
-!- PATHWAY: Second phase of glycolysis; first step.
-!- STBUITT: Honotetramer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the glyceraldehyde-3-phosphate dehydrogenase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
